

PetroTech Rust Proof Compound L

Heavy Duty Rust Preventive / Undercoating Material

PetroTech Rust Proof Compound L is a soft film rust preventive designed for relatively long term protection of both iron and steel. Rust Proof Compound L is formulated with a high melting point petrolatum and a special rust inhibitor system with penetrating and water displacing capabilities.

FEATURES:

Excellent long term rust protection – Petrolatum and special additives form a non-hardening, self-healing film to protect against the elements. Good water displacing capabilities ensures that the protective film is also water proof. The special rust inhibitor ensures maximum protection against corrosive attack. Good penetrating characteristic also ensure difficult to reach seams and crevices receive effective coverage.

Minimum surface preparation required – Ability to penetrate existing flaky or heavy rust means that little or no preliminary cleaning of metal surfaces is required before application

Minimal cost – Self-sealing properties of the protective film minimize the need for touch ups when film damage occurs through scratches or brush marks. Cost of this soft film material is generally much less than ordinary paint.

Easy Removal – Soft protective film is readily soluble in petroleum solvent, mineral spirits, or kerosene to enable easy removal as needed

Applications:

- Exposed Iron and Steel
- Vehicle Undercoating
- Transformer casings
- Bridges and floating pontoons
- Non-food storage vessels
- Non-potable water tanks
- Ballast tanks
- Hoisting equipment
- Farm implements

TYPICAL PROPERTIES

Rust Proof Compound L	
Appearance	Dark Amber
Penetration, Undisturbed @ 25° C (77°F)	280
NLGI Grade (approx)	2
Minimum Application Temp °C (°F) Brush Spray	18 °C (65°F) 38-54°C (100 -130°F)
Melting Point	64°C / 147°F
Flash Point	64°C / 142°F
Solvent, wt%	20
Ash, wt%	<0.1
Base Oil Viscosity Grade ISO	150
Flash Point, °F	335

Results shown are typical and may vary slightly
